# MEMORY GAME

1. How many globals are added to global namespace by your code?
   There are 8 global functions and 15 global variables.

2. List the changes to be made, if
   a) Number of cards change: Rows of cards will increase
   b) Number of cards per row change: it will be wrapped to the down line

3. Explain by your own words what is meant with IIFE in the context of js
   IIFE: Immediately-invoked Function Expressions
   It is a function that will excecuted immediately when we start an application.
   For example, the shuffle function will fire when ever the application start or
   reloaded:

```
//play.js line 74
(function shuffle() {
    cards.forEach(card => {
        let randomPos = Math.floor(Math.random() * 12);
        card.style.order = randomPos;
    });
})();
```
